Fig 1. Colier Primo adds another inch of travel to the rear wheel, and also features the word "Prime", meaning a whole lot of bike. As with all Colier bikes, it also uses the Kona 4 bar Clump frame, which means maximum durability with pedal friendly travel, geometry, and weight.

Fig 2. Take your Colier, and add a few upgrades to components. Now there you go... Dee-Lux.

Fig 3. Our entry level, pedal friendly freeride bike. Sorry if that sounds plain to you folks that are getting one of these. It won’t seem like entry level when you start riding it.
